第10章

10.1

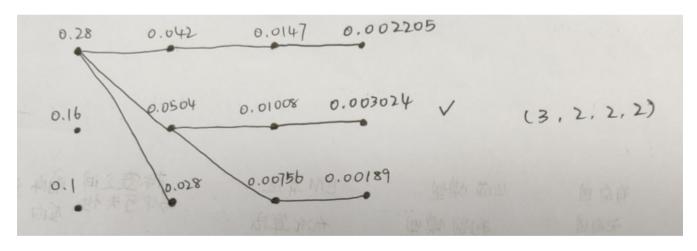

$$eta_4 = [1,1,1] \ eta_3 = [0.46,0.51,0.43] \ eta_2 = [0.2461,0.2312,0.2577] \ eta_1 = [0.112462,0.121737,0.104881] \ P(O|\lambda) = \sum_{i=1}^4 eta_i = 0.0600908$$

10.2

手算太麻烦,所以我写了个程序算的,而且没有验算过

$$P(i_4 = q_3 | O, \lambda) = 0.5369518160647323$$

10.3

10.5

前者是max,后者是sum。
